

AADS optical cable full name

Overview

All-dielectric self-supporting (ADSS) cable is a type of optical fiber cable that is strong enough to support itself between structures without using conductive metal elements. Fittings used with ADSS cable may be tension type, used at dead-ends where the cable terminates or changes direction, or may be suspension type, only holding the weight of a span with tension transmitted through them. Cables must be designed for the worst-case combinations of temperature, ice load, and wind.

AADS optical cable full name

What is ADSS Fiber Optic Cable?

ADSS fiber cable is mainly used on power pole frames, so it is required to have high mechanical strength and be able to withstand the impact of strong electric
