Adjustable Attenuator Parameter Setting Requirements

Adjustable Attenuator Parameter Setting Requirements

Attenuator

Adjustable attenuators are required when measuring a receiver sensitivity in the radar. Very precise attenuators are required when particularly high demands are

Attenuators

The attenuator could be built into the signal generator, or be a stand-alone device. It could provide a fixed or adjustable amount of attenuation. An attenuator section

An Introduction to Programmable Attenuator Systems

The attenuator is controlled by a combination of digital inputs, an analog voltage or via USB, RS-232, Ethernet or GPIB. These devices are bi-directional, so either port can act as an input or an output.

Attenuator (Adjustment)

This adjustment finds the correction factors for the attenuator steps 15 through 130 dB by using a spectrum analyzer. The spectrum analyzer makes a reference power measurement with the DUT set

What does the attenuation setting do in an RF spectrum analyzer?

When I made the measurement, the 'Attenuation' setting was on 10dB. So, my question is, have I done a mistake by using the 10dB attenuation setting when I was actually using a 30dB
