

Aggregation Switch Budget

Overview

According to our latest research, the global aggregation switch market size reached USD 9.7 billion in 2024, with a robust compound annual growth rate (CAGR) of 7%. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. I'm on the hunt for a 10Gbe switch and assumed like the rest of my Ubiquiti hardware there would be a premium on a Ubiquiti 10Gbe switch but the price on the USW-Aggregation of ~\$270 is oddly surprisingly reasonable, if anything it's on the cheap side and I'm wondering why, what am I missing?

All I. 5G, and 10G speeds for flexible customization, ensuring optimal performance, compatibility, and scalability. Flexible interface options like copper, fiber, and PoE ensure seamless integration and cost-effective deployment. Supports stacking for easier management, improved redundancy. This arrangement increases throughput beyond what a single relationship could sustain, offers redundancy in case one of the links.

Aggregation Switch Budget

Aggregation Switch

An Aggregation or "Top-of-Rack" switch is designed to connect everything in a rack at high speeds, then have an even bigger pipe out to the rest of the network. The Pro Aggregation does this with it's

Why is the USW-Aggregation so cheap, comparatively?

It's cheap because it's cheap to produce and doesn't have any bells or whistles. I have one and all 8 ports have either 10Gb DAC or lc/lc adapters in it and it works great. Per port, it's only cheap if you're
