

# **Basic Introduction to Relay Protection Testers**

## Overview

---

The relay protection tester is a universal testing device for relay protection, mainly used for testing and researching electromagnetic, integrated circuit, and microcomputer based protection relays and protection systems of various voltage levels. These testers replicate numerous fault events and operational scenarios to ensure that the relays respond correctly. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years. Traditional protective relay books are written by engineers as a resource for engineers to use when modeling the electrical system or creating relay settings, and they often have very little practical use for the test technician in the field.
