

Bending-insensitive fiber optic G 654 OEM

Overview

GL FIBER® Plus bending insensitive single-mode fibre combines two attractive features: excellent low macro-bending sensitivity and low water-peak level. E fibre and cable is rapidly increasing in these years, it would contribute more for the improvement of optical network in future. This is equivalent to 1% strain STL controls every stage of the manufacturing process so that quality is built in to every meter of fiber, rather than selected out at the end through testing. HENG TONG designs and manufactures fiber preform offering superior performance and reliability. It makes performance optimization in both C band (1530-1565nm) and L band (1565-1625nm).

Bending-insensitive fiber optic G 654 OEM

STL G654E 125 Fibre

STL controls every stage of the manufacturing process so that quality is built in to every meter of fiber, rather than selected out at the end through testing.
