Core switch cannot find IP address

Overview

Here are some solutions to resolve the issue of a switch not finding an IP address: Check the Router's DHCP Server: Verify that the router's DHCP server is enabled and responding to requests. Restart the Router and Switch: Restarting the router and switch can often resolve the issue. But from yesterday many users (LAN and Wifi) are facing issue as they are getting disconnected from network due to not getting any ip via DHCP from core switch. Quickly learn how to find a switch IP address! This guide provides multiple, easy-to-follow methods for discovering the IP address of your network switch, ensuring smooth network management and troubleshooting. This is useful when deploying IP phones! To establish if your core switch is providing DHCP, login to it and enter: `sh run | s dhcp` Example with two pools for two TR's. It is currently using the lan interface, the address that you need to use for the NAT is the WAN outside interface with the public IP - in this case `gi0/0/0` The Router is set to use the wrong interface for the NAT overload.

Core switch cannot find IP address

Cannot ping an IP from Core Switch, but can do it from my PC

172.16.32.1 is the gateway for your subnet but probably isn't the ip address your core is attempting to ping from. I'm guessing your core switch is attempting to ping from a subnet not allowed across the
