# DTU Network Automation Terminal and Serial Port

## Overview

---

NSA3100HD\_D30 Three-remote Distribution Terminal Unit (DTU) is a remote terminal for distribution automation systems independently developed by TBEA. It comes with various models, suitable for ring main units, switch stations, and other applications with 8 and 16 bays . DTU automation terminal is an Internet of Things wireless data transmission device that uses public operator networks to provide users with wireless long-distance data transmission functions. It uses high-performance industrial-grade 32-bit communication processors and industrial-grade wireless. This article will take the example of connecting the device through the RS485 mode of the Cloud-Usr DTU pass-through module to introduce how to convert the serial device into a network connection to Neuron. Transparent transmission of serial data50uA low power consumption3-8km communication distanceMultiple network communication modes In the above three working modes, MDL311 can send and receive data, and the parameters mentioned above are measured data.
