

Damaged fiber optic cable in Mexico

Overview

Telecommunications company Telcel announced Wednesday night that a damaged fiber optic cable caused intermittent service slowdowns and outages in various parts of Mexico during the afternoon. Fiber optic cables are the backbone of modern networks, delivering fast and reliable data transmission. With the right tools and techniques, you can efficiently repair damaged fiber cables and restore. However, when these delicate fibers are bent, crushed, or exposed to harsh environments, the light signal weakens — resulting in high. The company said in a press release that it redirected the traffic through alternate servers, which put.
