

Data Center Intelligent Small Busbar

Overview

Intelligent Busbar is an end-of-row power distribution device designed for high-density data centers, replacing traditional row head cabinet and cable distribution methods, with advantages of small footprint, flexible expansion, and intelligent monitoring. Finally, this paper highlights the significance of arc flash risk in the data center and discusses how improved arc resistance can be achieved through innovative busway power distribution architecture. Over the past decade data centers have become one of the world's fastest growing industries, with. The Inspur intelligent busbar integrates the latest network monitoring technology, digital electronic control and factory. Thermal performance is controlled with busbar temperature rise $\leq 40K$ and outer shell $\leq 10K$.

Data Center Intelligent Small Busbar

Intelligent small busbar for data center-Dingsheng group

Widely used in power grid, data center, power generation, oil refining, environmental protection, transportation and other industries Dedicated to provide customers with safe, professional
