

Data Center Rack Vibration Isolators

Overview

RACK vibration isolators are 100% metal solutions specially designed for data centres to protect critical equipment from external vibrations. At GERB, we specialize in seismic isolation and vibration protection—helping data centers around the world safeguard their infrastructure, increase uptime, and future-proof their investments. The volume of data transferred daily is immense, so closer proximity of data centres. Using patented Ball-N-Cone™ isolator technology, ISO-Base™ decouples equipment from seismic forces—significantly reducing shock transfer and. Capable of withstanding a wide range of temperatures, corrosion, and high electrical conductivity, they offer exceptional reliability and adaptability.

Data Center Rack Vibration Isolators

RACKS & DATA CENTER SILENTFLEX ANTI-VIBRATION

A cabinets, specially designed suspension to minimize vibrations in computerized Silentflex®: racks and anti-vibration data centers pplied installation oversees quality assurance ce with installation
