

Dedicated fiber optic network

Overview

A dedicated fiber line delivers private, high-speed Internet with low latency and symmetrical speeds, ideal for businesses needing reliable connectivity. Unlike shared networks that divide bandwidth and cause slowdowns, it guarantees consistent performance with symmetrical upload and download. This means the connection is not shared with other users, resulting in faster and more reliable speeds. Most residential customer will have a fiber that will feed a cross connect box and then hits a splitter that splits into 32. Advanced managed network solutions for service providers to address hyperscaler bandwidth demand Cloud providers and hyperscalers are expanding rapidly to fuel growth, artificial intelligence (AI) initiatives, and entry into new and emerging markets.

Dedicated fiber optic network

Fiber to the x

Fiber to the x (FTTX; also spelled "fibre") or fiber in the loop is a generic term for any broadband network architecture using optical fiber to provide all or part of the
