

Displays that the fiber optic cable is not plugged in

Overview

The first step in fixing this error is to check the physical hardware components involved. Ensure that the network cable is securely plugged into the computer and the router or modem. Or it could be caused by the quality of the connector itself, such as poor end-face geometry that doesn't pass the parameters defined by IEC PAS 61755-3 standards, including angle of the. If you are unable to access the internet or experience frequent disruptions in your connection, it could be an indication of a damaged cable.
