

Distribution Box Guide Rail Principle

Overview

The distribution box consists of a distribution box base and a guide rail. The guide rail clamping slot seat is clamped in the clamping slot of the base fastener. The information provided in this document contains general descriptions, technical characteristics and/or recommendations related to products/solutions. For this purpose, Telegärtner has developed the train approved dis-tribution box, called RDB. Because of its tested reliability against vibrations and shocks and also heat, coldness and humidity, the RDB is perfectly suited for use in harsh environments.
