Distribution Network Automation Systems and Equipment

Overview

Distribution automation (DA) is a family of technologies, including sensors, processors, information and communication networks, and switches, through which a utility can collect, automate, analyze, and optimize data to improve the operational efficiency of its. From primary equipment to control centers, Hitachi Energy's comprehensive portfolio of distribution automation solutions enables utilities to see what is happening inside the distribution grid, ensuring efficient, reliable and uninterrupted operation, anywhere, anytime. Electric utility companies are under increasing pressure to improve reliability, minimize customer outages and optimize. This document offers a complete guide to Cisco's Smart Grid Field Area Network (FAN) solution architecture. It covers various ways this solution can be used, including: ● Monitoring secondary substations for scenarios like Fault Location, Isolation, and Service Restoration (FLISR) and Volt/VAR.
