

Do you have iron cable trays

Overview

A GI cable tray (Galvanized Iron Cable Tray) is a structural system that protects, routes, and supports electric wires and cables in industrial, commercial, or even infrastructure projects. Due to their corrosion-resistant abilities, the GI tray systems are preferred over. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays.
