

Does fiber optic cable include network cable

Overview

To connect two or more computers or networking devices in a network, network cables are used. This cable contains a conductor, insulator, braiding, and sheath. Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can. Running copper Ethernet cables and coax cables outdoors can put your entire home or office network at risk for power surges from lightning strikes. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry. Optic cables are commonly found in a variety of applications such as the internet and broadband, phone lines, networking, and telecommunications.
