

Electrical Automation Relay Protection

Overview

Relay protection and automation (RPA) are critical systems in electrical networks. RPA automatically detect faults and emergency situations, then take action to disconnect the damaged section of the network to protect equipment and ensure stable and reliable power supply. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years. The global energy transition is ushering in a new era of power electronic-dominated grids (PEDGs), to complement the increase in the widespread integration of renewable sources like wind and solar. It is reshaping traditional grid architecture and making way for more flexible, efficient and.
