

Electromagnetic compatibility of nuclear power plant distribution boxes

Overview

IEC 62003:2020 establishes requirements for electromagnetic compatibility testing of instrumentation, control, and electrical equipment supplied for use in systems important to safety at nuclear power plants and other nuclear facilities. The potential for disruption of safety-related I&C systems by electromagnetic interference (EMI), radio-frequency interference. This regulatory guide has been revised to provide guidance to licensees and applicants on additional methods acceptable to the NRC staff for.
