Bacteriophages get a foothold on their prey

The long tail fibres can extend more than $1000\text{\AA}$ out from the tail and have a total mass of more than half a million daltons. They consist of four different proteins and assume an articulated leg-like shape.

(PDF) Bacteriophage T4 long tail fiber domains

Bacteriophage T4 initially recognizes its host cells using its long tail fibers. Long tail fibers consist of a phage-proximal and a phage-distal rod, each

Fiber tail fiber

Fiber optic cables are a type of transmission medium used to transmit data over long distances at high speeds. They are made up of thin strands of glass or plastic fibers that are used to

[Read More](#)

Molecular anatomy of the receptor binding module of a

The tailed phage T4 encodes a specialized device for this purpose, the long tail fiber (LTF), which allows the virus to move on the bacterial surface

The Role of Side Tail Fibers during the Infection Cycle of Phage Lambda

Moreover, the side tail fibers presumably slow down the diffusion of Ur-? through the top agar layer, resulting in the smaller plaque size . However, how the side tail fibers affect phage

Long Noncontractile Tail Machines of Bacteriophages

A tail appears to provide the best solution to this problem, and may represent one of nature's best designed machines for the transfer of macromolecules into bacteria. In this chapter, we

[Read More](#)

Structure of the bacteriophage T4 long tail fiber receptor

Here we present the crystal structure of the receptor-binding tip of the bacteriophage T4 long tail fiber, which is highly homologous to the tip of the

[Read More](#)

Structure of the bacteriophage P2 tail

These extra long tail sheaths are 1.5-2x the diameter of the normal P2 tail, and appear to have a central channel, indicating that they lack a tube. Some free giant tail tubes, however, are

Architecture of the bacteriophage lambda tail: Structure

Bacteriophage lambda has a double-stranded DNA genome and a long, flexible, non-contractile tail encoded by a contiguous block of 11 genes downstream of the head genes. The tail

[Read More](#)

Organization of the bacteriophage T4 long tail fiber. (A)

The long tail fibers (LTF) are composed of four distinct proteins (i.e., gp34 to gp37), with the receptor binding region located at the C-terminal part of gp37.
