

Fiber Optic Switch Mirror Port

Overview

A fiber optical switch uses an array of micro-electromechanical systems (MEMS) mirrors to switch the light signals from one fiber optic cable to another. Non-latching; 1xN, 2xN, NxM; Fiber Type SM, PM; 1250 to 1670 nm; Insertion Loss 0. DiCon's MEMS 1xN Switch components are produced based on DiCon's proprietary and proven MEMS tilting mirror technology. The drawing illustrates a Fiber Optic Network connected to the SC Duplex, Single Mode COMMON port with access to two other Fiber Optic Networks connected to the SC Duplex, Single Mode A and B ports, respectively. Fiber-optic switches control light paths within fiber optics, ranging from simple on/off types to complex matrix configurations like 64x64. The simplest device is an on/off switch with one input and one output, which allows.

Fiber Optic Switch Mirror Port

MEMS 1xN Fiber Optical Switch

The MEMS 1xN Fiber Optical Switch is based on a reflecting silicon mirror that directs light from an input fiber to the requested output fiber among the N output fibers. The light path length difference
