

Fiber optic cable self-provided terminal

Overview

A Flexible Service Terminal (FST) is a factory-sealed fiber distribution unit designed for outside plant (OSP) environments. It enables quick and reliable distribution of optical signals from feeder cables to customer drop locations in Fiber-to-the-Home (FTTH) networks. Our fiber optic terminals can be deployed below grade (in a flower pot, pull box, small or large vault), as a pedestal mount, pole mount, strand mount or within an aerial deployment.
