

# Fiber optic communication unit dBm

## Overview

---

A measurement of 0 dBm using an optical power meter indicates 1 milliwatt of power. This document focuses on decibels (dB), decibels per milliwatt (dBm), attenuation and measurements, and provides an introduction to optical fibers. Instead, it quantifies how much a signal has increased or decreased relative to another signal.

### What are the differences between dB and dBm in Fiber

Fiber TAPs play a crucial role in network monitoring by allowing the non-intrusive monitoring of data passing through fiber optic links. When working with fiber optic

## Understanding dB and dBm in Fiber Optic Communications

1. What is dB? In optical communications, dB (decibel) is a logarithmic unit used to quantify signal strength, power gain, or loss.
