

Function of 35kV busbar surge arrester

Overview

Lightning protection for 35kV transmission lines and substations to reduce lightning trip rates and equipment insulation breakdown risks; Power frequency overvoltage suppression (such as frequent operation overvoltage scenarios in wind farms and industrial plants). Such overvoltages can be caused by a direct or nearby lightning strike, an electromagnetic pulse, electrostatic discharge. The Prysmian 35kV R-Stack Surge Arrester offers a reliable and easy-to-install solution for protecting medium-voltage equipment and underground cables from voltage surges caused by lightning and switching transients. 1, and some models are suitable for special environmental requirements such as high altitude and salt spray Core. When a sudden power surge or lightning surge hits your wiring, the surge arrester quickly redirects that extra energy safely to ground so it doesn't destroy your equipment.

Function of 35kV busbar surge arrester
