

# **Function of the power supply fiber optic junction box**

## Overview

---

They function as junction points that manage, protect, terminate, and distribute fiber optic cables, ensuring efficient data transmission between different network elements. A fiber optic junction box, also known as a fiber optic distribution box or termination box, is a protective enclosure that facilitates the connection and management of fiber optic cables. Fiber Distribution Boxes (FDBs) are critical components in modern telecommunications infrastructure, particularly in fiber optic networks. Sometimes people confuse the Terminal box and the junction box because of their similar appearance and function.
