

How much does a temperature-measuring optical cable for a Dominic power system cost

50km/spool

Overview

Distributed temperature sensing systems (DTS) are devices which measure temperatures by means of functioning as linear. Temperatures are recorded along the optical sensor cable, thus not at points, but as a continuous profile.

How much does a temperature-measuring optical cable for a Dominican Republic

technology
Construction of sensing cable and system integration
Laser safety and operation of system
For temperature estimation
Applications

Distributed temperature sensing systems (DTS) are optoelectronic devices which measure temperatures by means of optical fibres functioning as linear sensors. Temperatures are recorded along the optical sensor cable, thus not at points, but as a continuous profile. A high accuracy of temperature determination is achieved over great distances. Typically the DTS systems can locate the temperature to a spatial resolution of 1 m with accuracy to within ± 1 °C at a resolution of 0.01 °C. Measurement distance
