

# **How much does an AI server cost in Asia**

## Overview

---

Standard 3–5 year plans typically range from \$15,000 to \$40,000 per server, covering firmware, diagnostics, and parts replacement. Vendors like Supermicro offer flexible, OpEx-friendly options to help manage these expenses. Organizations deploying AI infrastructure often discover that GPU servers account for only 60% of their total investment. The hidden costs are advanced cooling systems, power upgrades, specialized networking, and operational overhead, which can double or triple your initial budget projections. As artificial intelligence adoption expands, businesses must balance high-performance computing needs with scalable infrastructure.
