

# How much does it cost per kilometer to lay optical fiber cable

## Overview

---

A practical frame is \$40,000–\$350,000 per km, with a common mid-range around \$120,000–\$180,000 per km for standard single-mode fibre in ducted runs. Per-unit considerations include \$/km for total project, \$/duct meter for ducting work, and \$/splice for termination. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. In straightforward urban corridors with existing ducts or minimal permitting hurdles, total per-km costs often land near the low end. This guide outlines the main cost components, estimates, and budget ranges to help plan a fiber backbone project. The cost of fiber optic cable per kilometer can vary significantly based on a variety of factors, including the type of fiber optic cable, the geographical region, the installation environment, and the specific requirements of the project. These networks are constructed both underground and through aerial fiber, at an average cost of \$1,000 to \$1,250 per residential household passed or \$60,000 to \$80,000 per mile. Dgtl Infra provides an in-depth overview of fiber optic network construction, including its density, as measured by.
