

How to calculate the cost of fiber optic cable removal

Overview

To estimate and control the cost and time of fiber optic cable termination projects, start by clearly defining the project scope and conducting a site survey. Calculate material, labor, and equipment costs, adding a contingency reserve for unexpected expenses. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. Single-mode fiber costs less per foot than multimode fiber, but it requires more. Main cost drivers include cable grade (indoor vs outdoor, armoured), distance, and labor for trenching, splicing, and termination. What we are often faced with is a change from an unstructured wiring system to a structured wiring system that will comply with.
