

How to connect pre-installed fiber optic cables in the field

Overview

Nowadays, modern field-installable connectors can be installed on site as quickly and easily as connectors for copper cables. Strip the fiber, cut it to size, insert it into the assembly aid, insert the fiber into the connector, lock it – done! Starting with site surveys and permissions, to installing fiber optic cable and emphasizing the process as a key stage in mastering fiber optic installation, to the careful handling of cables and high-stakes splicing, each stage is critical. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. It is imperative that certain procedures be followed in the handling of these cables to avoid damage and/or limiting their usefulness. Proper connection of fiber optic cables is essential to harness these benefits fully, as even minor errors can lead to significant performance issues like signal loss.
