

# **How to connect the FC interface of a fiber optic to Ethernet cable**

## Overview

---

Ethernet Side: Connect the Ethernet cable to the RJ-45 port on the media converter. Fiber media converters allow you to connect two different types of network infrastructure: fiber-optic and copper (Ethernet). These devices are essential when you need to bridge fiber optic cables with Ethernet cables, especially in long-distance or high-speed network setups. You can configure ports xe-0/0/0 through xe-0/0/5 as fc-0/0/0 through fc-0/0/5 and ports xe-0/0/42 through xe-0/0/47 as fc-0/0/42 through fc-0/0/47 to create blocks of native FC. Ethernet ports are designed for copper cables (like Cat5e or Cat6), which transmit data using electrical signals.
