

# **How to tell if a pigtail is multimode or single-mode**

## Overview

---

Single Mode is typically yellow, while Multimode is orange, aqua, or lime green. You can also check the labeling on the cable jacket — for example, "OS2 9/125" indicates Single Mode, and "OM3 50/125" indicates Multimode. Fiber optic pigtailed play a critical role in modern optical networks, serving as the interface between optical fibers and active or passive devices through fusion splicing. This guide explains how to identify them by appearance, labeling, and technical specifications, helping you make the right choice for your installation. [What Is Single-Mode Fiber?](#)

[Best for: What Is Multimode Fiber?](#)

[Best for: Choose single-mode pigtailed if:](#) [Choose multimode pigtailed if:](#) [Browse available options:](#) [Need help.](#) Knowing how to tell the difference between single mode and multimode fiber is crucial for network efficiency; the core distinction lies in the fiber's core diameter and how light travels through it, affecting bandwidth, distance, and cost.

## How to tell if a pigtail is multimode or single-mode

---

### Singlemode vs Multimode Fiber

Even among people well versed in fiber optics, sometimes the differences between singlemode and multimode fiber are a bit unclear. That gap matters: the choice affects reach, bandwidth, optics cost,
