

Internet New Energy Recommendation Platform

Overview

The Smart Energy scaleOS™ platform, powered by the recommender engine, enables the automated identification of energy-efficient upgrades. The engine automatically analyzes building characteristics, regional environmental factors, utility tariffs, government incentives. Energy & Utilities teams struggle with grid instability from increasing renewable penetration and distributed energy resources (ders), aging infrastructure leading to unplanned outages costing utilities millions in penalties and lost revenue, and inaccurate demand and generation forecasting causing. 0 technologies such as the Internet of Things and cloud computing has accelerated the development of various platforms. In new energy vehicle (NEV) recommendation platforms, customer reviews have been well recognized for their ability to provide value-added information to.

Internet New Energy Recommendation Platform

AI Energy Recommender Engine , Omdena x Retrolux , Projects

Omdena and Retrolux built an AI recommender engine to optimize building energy systems, cutting costs and carbon emissions sustainably.
