

**ZTP Thermal & Power**

# **Is 62 5 fiber optic cable multimode**

## Overview

---

5 micron fiber, known as OM1, is a multimode optical cable with a 62. It uses LED light sources and supports data speeds up to 1 Gbps over 275 m and 10 Gbps up to 33 m. OM1 is common in legacy LAN systems but has been replaced by 50  $\mu\text{m}$  fibers in. Multimode fiber optic cable (or glass) is a common specification of optical fiber that offers a much wider core size or core diameter of 50-62. With the cladding layer, they are both 125 micron, and with the buffer layer they are 250nm. You should ensure that you purchase patch cables that match the core of any other fibers to which.

## Is 62.5 fiber optic cable multimode

## **What is 62.5 Micron Fiber Optic Cable?**

62.5 micron fiber is a type of multimode fiber optic cable (MMF), where light signals travel through a larger core that allows multiple paths (or "modes") of light to propagate.
