

Lebanon XFP Optical Module

Overview

Principal applications include, 10 Gbit/s, (SONET) at rates, synchronous optical networking STM-64, 10 Gbit/s The XFP module is compliant with the 10G Small Form-Factor Pluggable (XFP) Multi-Source Agreement (MSA), supporting data-rate of 8. The transceiver module comprises a transmitter with DFB laser and a receiver with a PIN. Compatible optical transceivers, DAC, and AOC cables for enterprise networks, data centers, ISP infrastructure, and FTTH deployments across Lebanon and the Middle East. It was defined by an industry group in 2002, along with its interface to other electrical components, which is called XFI. An XFP transceiver (10 Gigabit Small Form-factor Pluggable) is a hot-swappable optical module designed for high-speed telecom and carrier networks. Slightly larger than SFP+ modules, XFP operates independently of the host system's clocking, making it a flexible solution for long-haul and metro. SFP modules also offers special feature, so called Digital Diagnostic Monitor Interface / Digital Optical Monitoring (or DDMI / DOM for short). According to the encapsulation type, optical modules are classified into SFP, eSFP, SFP+, XFP, SFP28, QSFP+, CXP, CFP, QSFP28, and QSFP-DD. Whether you are running a 1G link between two MikroTik switches or a 100G backbone in a datacenter, the right SFP module determines.
