

Lowest Loss Beam Splitter

Overview

, 50/50 FBS, can be used as the frequency-mode Hadamard gate for frequency-encoded photonic qubits. A beam splitter (or beamsplitter, power splitter) is an optical device which can split an incident light beam (e. a laser beam) into two (or sometimes more) beams, which may or may not have the same optical power (radiant flux). The most common application is to combine two pump lasers into one single fiber to double the pump power in EDFA or Raman Amplifier. The Beam Combiner/Splitter has extr r Wavelength (λ_c) Operating Wavelength Range Typ.

Lowest Loss Beam Splitter

Fiber Optic Splitters , PLC & FBT Optical Splitters

Discover a wide range of reliable fiber optic splitters. Our PLC and FBT splitters offer low loss and various split ratios for FTTH, PON, and CATV networks.
