

Maximum Distance of SFP Gigabit Optical Module

Overview

The wavelength can be 850 nm, 1310 nm, or 1550 nm, and the transmission distance ranges from 0. SFP distance refers to the maximum effective range over which an SFP optical module can transmit data while maintaining signal integrity. Anyone who works with 10G SFP+ transceivers knows that the achievable distance depends on far more factors than just the module used. 10G SFP modules are transceivers used to facilitate 10 Gigabit Ethernet connections over fiber optic cables. A 10GBASE-ER SFP module is a long-reach 10Gbps fiber optic transceiver designed to transmit data over single-mode fiber up to 40km, making it a key solution for extended Ethernet links beyond standard campus or data center distances.

Maximum Distance of SFP Gigabit Optical Module

Cisco SFP Modules for Gigabit Ethernet Applications

The 1000BASE-EX SFP operates on standard single-mode fiber-optic link spans of up to 40 km in length. A 5-dB inline optical attenuator should be
