

# **Minimum distance between cable trays and pipes**

## Overview

---

11 Minimum Distance between process pipe surface and cable tray in parallel run shall be 300mm. Failure to maintain sufficient spacing can result in several critical issues that could affect the safety and functionality of the installation. 8 (Other Mechanical Stresses (AJ)) in that document provides requirements for cable support. The NEC requires that cable trays must be supported by members at an interval specified by the cable tray manufacturer, but not more than 5 feet for horizontal runs to support the weight of the cables and other loads.
