

No internet access on two ports of the fiber optic router

Overview

Check for internet access: Connect a device to your router via Wi-Fi or Ethernet. So, here's the problem that literally started today (It had been running 100% fine this way for over 4months, with both routers having multiple devices connected to them and not having any problems of conflicts). If your router shows it's connected but you can't access the internet, don't panic—this is a common issue with simple fixes. To connect your fiber optic cable to a router, ensure you have the following: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP.
