

Normal wiring in a household electrical distribution box

Overview

Wiring Direction: Wiring between the main circuit breaker and each branch circuit breaker in the box generally goes on the left, and the wiring out of the distribution box generally goes on the right. House wiring (or residential electrical wiring) refers to the set of conductors, protective devices (circuit breakers/fuses), sockets, switches, light fittings and earthing arrangements installed to distribute electricity within a dwelling. Whether you're building new or updating an older system, the way your wiring is planned and installed affects how safely and efficiently everything runs. It takes the incoming power and safely distributes it to different circuits throughout your building. The Single Phase supply is 220Vac supply, which consists of 2 wires, one wire is Live and the other one is Neutral.
