

# Optical Communication FAU Module

## Overview

---

FAU (Fiber Array Unit) multifiber assemblies offer high-density, high bandwidth solutions for the new era of fiber optic applications, including telecommunications, data centers, silicon photonics, defense and medical applications. The Master's degree program CME is designed as a two-year full-time postgraduate program. In order to graduate students need to earn a total of 120 ECTS (including 30 ECTS for the Master's thesis). With customizable V-groove chips and covers, and Corning's capability of developing and making specialty fibers, our FAU products can meet a wide variety of customer requirements on the inter-fiber core pitch and its precision, channel number, fiber type, and.

- Customizable V-Groove size to meet different applications
- Full lid/recessed lid/no lid, 0.1mm minimum thickness for the lid
- Angles can be customized as needed
- Various types of fiber: SM/MM/PM/Small mode field diameter fiber, etc.

At the Campo platform you can find all modules and the courses which offered in the current semester for each module.

## Optical Communication FAU Module

---

### Fiber Array Unit (FAU) Series

An FAU can be put inside a reconfigurable optical add-drop multiplexer (ROADM) and function as an optical transmission for the wavelength selective switch (WSS) to switch traffic
