

# **Recommended Small Spectrometer in Moldova**

## Overview

---

For broad spectral coverage from UV to NIR (up to 1050nm) we recommend ILT950 or ILT560a with 25um width slit; for UV measurement (200 to 450 nm) ILT950UV with 50um width slit is suggested and for application above 900nm the ILT950NIR with InGaAs CCD detector is available. We have more than 20 different mini-spectrometers for the ultraviolet to near infrared regions. Four models are available to cover wavelengths from 200 nm to 1700 nm at resolutions that range from <math>0.7733</math> Do you have any questions or requests?

Use this form to contact our specialists. This article provides the specification of various ILT spectrometer models and explains how we quantify these specs to help our customers select the best solution for their specific application through better understanding of the specifications ILT spectrometers are based on the Czerny-Turner. If you're looking for the top USB pocket spectrometers for on-the-go analysis in 2025, I recommend checking out compact models like the Spectryx.
