

# **Ring network switch fiber optic networking interface**

## Overview

---

A fiber optic ring network is a physical or logical network topology where devices (usually switches) are connected in a closed-loop using fiber optic cables. The fiber optic ring redundancy design for industrial Ethernet switches is precisely engineered to address this pain point—achieving millisecond-level fault self-healing through the synergy of physical ring architecture and intelligent protocols, thereby constructing the "self-healing heart" of. which type of connection is resilient Star or Ring?

?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. The TC3720 10/100M 6-Port Self-Healing Ring Ethernet Switch is a low cost solution for linking multiple RTUs & PLCs in industrial and SCADA fiber optic networks. This circular arrangement creates a highly efficient, high-capacity network architecture with several notable advantages.
