

Secondary and tertiary distribution boxes

Overview

Secondary packaging groups products together for handling and display – like shrink-wrapped multipacks or retail boxes. Let's make an example for clarity: A newly constructed residential area introduces a 10kV power line to a substation. In this article, we're going to reveal the differences between each type of packaging, when each one is used, why they matter and how to find a professional packaging company to help ensure your product. Each type serves a specific purpose in protecting the product and ensuring its safe delivery. Secondary distribution boxes, also known as sub-distribution boxes, generally serve specific power supply areas. These boxes have inner and outer doors, powder-coated exteriors, and are designed for safety and aesthetic appeal, with rainproof tops for outdoor work.

Secondary and tertiary distribution boxes

Types of Packaging: Primary, Secondary and Tertiary , Packhelp

Secondary packaging adds protection during last-mile transit. Tertiary packaging helps leverage economies of scale and
