

# Server AI garbled characters

## Overview

---

Upload any AI-generated image and replace garbled text with correctly spelled words. For generating business document drafts, I'm using OpenAI Chat Completions API with structured output (using the Python API library and Pydantic) successfully since months with two different versions of the GPT 4o model. Have you ever prompted your favorite AI tool like ChatGPT or Copilot to generate an image for you?

Maybe you want a feature image for a blog post or your PowerPoint presentation, and you type a well-thought-out prompt explaining everything you want in it. Struggling with garbled characters, broken tables, or messy math formatting when you copy from AI?

Discover the ultimate way to convert AI content to Word. Working with advanced AI models like ChatGPT, DeepSeek, or Claude isn't just about reading text; it's about generating tables, mathematical. In particular, Powerlevel10k, fancy prompts, dynamic icons, and the right status bar can interfere with the Agent reading the terminal output. , random symbols like "#@!%", distorted characters, or unreadable glyphs) in AI-generated images typically occurs when the AI model attempts to simulate text-like shapes without understanding real language, or when non-Latin scripts are misrendered due to font or encoding.
