

Slow speed improvement when connecting a fiber optic router

Overview

Issue 2: Slow Network Speeds Cause : Signal attenuation, outdated hardware, or network congestion. Issue 3: Intermittent Connectivity With upload and download speeds that often exceed 1,000 Megabits per second (Mbps), fiber optic internet has the capacity to provide a seamless online experience while powering all of your connected devices at once. Slow internet speeds lead to delays in work, especially for remote workers dependent on online meetings and large data transfers. The Wi-Fi router plays a crucial role in determining the speed and reliability of your fiber Wi-Fi connection. I was expecting dl speeds of 900+ on wired connection and 600+ on wifi when close to router, what I am getting is 100 (dl) on wired and max of 350mb on wifi when sitting on top of the router, other rooms in my apartment are getting 50-200~ on the wifi network.
