

# **Spacing between electrical components in the distribution box**

## Overview

---

In order to facilitate the maintenance or adjustment of the distribution board, the electrical components in the box must be between 0. When applying Power Distribution Blocks (PDBs), there are various requirements that shall be satisfied, based upon different UL Standards, the NEC®, and the specific application.

## Spacing between electrical components in the distribution box

---

### Distance between components and leakage in distribution board

In order to facilitate the maintenance or adjustment of the distribution board, the electrical components in the box must be between 0.4 ~ 2m from the ground. All wiring terminals shall be located at least
