

# **The function of clustered fiber optic patch cords**

## Overview

---

The primary function of these cables is to facilitate low-loss, high-speed data transfer between devices in telecommunications, data centers, and industrial settings. At ZION Communication, we design and manufacture a full range of fiber patch cords for: This guide will help you quickly understand the main types of fiber patch cords and how to choose the right solution for your project - and how ZION can support you with stable quality, flexible customization. These short fiber optic cords connect transceivers, switches, patch panels, and servers. As data rates increase from 10G → 100G → 400G → 800G, patch cables must handle more bandwidth, more density, and stricter. These cords come in different types, including single-mode and multimode options, each designed to meet specific network requirements.
