

# **The type of optical fiber used for pigtails**

## Overview

---

A fiber pigtail is a short fiber optic cable with a factory-installed connector at one end and a bare fiber at the other, allowing it to be spliced directly into fiber cabling or patch panels. It's used to terminate optical fibers in ODFs (optical distribution frames), closures, or. The connector end plugs into devices like transceivers or patch panels, while the bare end is typically fusion spliced to a fiber optic cable. Compared with quick termination or epoxy and polish connections placed on the field.
