

ZTP Thermal & Power

Upgraded version of Irish optical core router

Overview

The newly launched eir Wide-Fi system, powered by WiFi 7 technology, promises to deliver faster speeds and more stable connections throughout the home. In August 2019 1Gbps FTTH was finally available at my home (DSL was available since April 2006). The following setup has been confirmed to work with Eir and Digiweb FTTH services at least. Eir, though now private, was the incumbent telecom provider for the country (Telecom Éireann), and so operates. We're setting a new standard for speed, capacity, and reliability - transforming how you live, work, and play at. The Teltonika RUTC42 is an industrial dual-modem 4G LTE Wi-Fi 6 edge router with (5) 1Gbit ports (4x LAN, 1x WAN), dual-band Wi-Fi 6 operating simulta. Depending on what way they have the connection setup, you may also need to change the connection type (DHCP is usually the default, but some providers use PPPoE or other connection types). Are you in search of the perfect router for your optical fiber internet connection?

Look no further! In this guide, we'll explore the top options available on the market to ensure you experience blazing-fast speeds and seamless connectivity.
