

West Africa Network Cable Fiber Optic Cable

Overview

This 17,200 Km long fiber optic cable was built by MTN along with a consortium of 16 leading international telecom carriers. While submarine communications cables are used to connect countries and continents to the Internet, terrestrial fibre optic cables are used to extend this connectivity to landlocked countries or to urban centers within a country. Orange announced the commissioning and commercial launch of Djoliba, the first pan-African backbone network, covering 8 countries: Burkina Faso, Côte d'Ivoire, Ghana, Guinea, Liberia, Mali, Nigeria and Senegal. The launch of 2Africa enables us to offer our customers seamless connection between Africa and Europe, together with our SEA-ME-WE 5 and AAE-1 subsea cable resources to further extend to Asia, which is an important milestone of our global development strategy," said Jessica Gu, Director & Chief.
